

AI in Local Government – A Risk-Based Policy Development Workshop

Purpose:

At the end of this process, your organization will have an AI Risk Assessment for every function, a Draft AI Policy, and a Draft AI User Agreement.

Objectives:

- Create a shared understanding of AI Risks, Benefits, and the Code of Ethics for AI use in your organization with training.
- Create a draft AI Risk Assessment for both external and internal risks imposed using AI by both your employees and Cyber Criminals.
- Create a draft AI Policy and draft AI User Agreement for your organization, informed by your potential AI use cases and your AI Risk Assessment Workshop.

Outline of the Workshop:

1. A virtual training session with organizational decision makers to create a shared understanding of AI Vocabulary, AI Ethical Use, AI Risks, and AI Benefits.
2. A three to four-hour in-person workshop to conduct a risk assessment of your organization's use of AI and the risk imposed by cyber criminals' use of AI against your people, networks, and systems. (We recommend you include your most enthusiastic and most skeptical potential AI users.)
3. ATOM will finalize and submit the results of the AI Workshop to your organization.
4. ATOM will use the results of the AI Risk Analysis and Mitigations to draft an AI Use Policy for your organization and submit it to your organization.
5. ATOM will use the draft AI Use Policy to draft an AI User Agreement document and submit it to your organization.
6. You will use your local process to have the AI Use Policy and AI User Agreement approved and implemented.

NH Municipal Cyber Defense Program

The New Hampshire Municipal Cyber Defense Program (MCDP), managed by The ATOM Group, is a key initiative for enhancing New Hampshire's Cybersecurity Defense Services. Funded by the NH Department of Information Technology and the State and Local Cybersecurity Grant Program, it aims to protect public trust in technology by providing comprehensive Cybersecurity training.

The MCDP is critical to New Hampshire as it enhances cybersecurity readiness across municipal and public sector entities. This program stands out because it is customized based on the municipality's type, job description, and organization's existing cybersecurity readiness.
